

PROFILE

Product designer with **7+ years** in complex digital products. I work on the systems layer — attribute models, role permissions, moderation queues, approval and payment flows — the part that decides whether an interface survives real scale. Shipped a mobile bank used by **~1.7M people** and, across Alif Bank and Alif Technology, four production systems — in each case as the sole designer.

EXPERIENCE

Product Designer — Alif Technology

Mar 2026 — now

Sole designer on platform products — communication infrastructure, marketplace and new business lines.

- **SMS-Gate 3.0 — communication platform** IN DEVELOPMENT
Turned Tajikistan's largest SMS platform (**2.4M+ messages/month**) into multichannel infrastructure: SMS, Email and Telegram live, WhatsApp and Push reserved at token level so new channels ship without redesign. **~110 frames** handed off, client cabinet and admin covered end to end.
- **UmedMall — marketplace OS** IN DEVELOPMENT
Designed all three surfaces — storefront, moderator console, seller cabinet — on one taxonomy. Collapsed **19 sections into 7** task-based groups and removed free-text product attributes entirely, so filtering holds across hundreds of independent sellers.
- **Alif Charge — EV charging network**
Took a BRD for a new business line to a production landing page: operator acquisition flow, lead capture and analytics events, bilingual copy.

Product Designer — Alif Bank

2024 — Mar 2026

Sole designer across 7 large-scale products and 20+ functional modules: mobile banking, internal credit systems, operations dashboards.

- **KK Service — internal credit decision platform** LIVE
Unified **10 intake channels** into one review queue with a **13-status pipeline** across **4 employee roles**. Separated AI-cleared from human-reviewed applications visually, so risk-flagged cases can never be silently auto-approved.
- Also Alif Mobi (mobile banking), Qline (queue & booking), Teams and Managers (internal operations), freelance platform with separated client/freelancer UX.

UX/UI Designer — Dushanbe City Bank

2021 — 2022

Designed DC Next end to end — the mobile banking and city services app that replaced the legacy DC Wallet and became the bank's main digital product.

- **~1.7M registered users, ~810,000 monthly active** completing 3+ transactions; 1,461,305+ downloads at 2,500–3,000 per day.
- Designed **300+ services** — utilities, public transport, Express Pay terminals — under one navigation model, plus transaction history and expense tracking.
- Introduced QR and NFC transport payments, replacing cash on city routes; supported transfers to **50+ countries** via UnionPay, MIR, UzCard and Humo.
- Worked alongside product managers, developers and security teams; iterated on user feedback and real usage data.

Freelance Brand & Product Designer — Upwork

2022 — 2023

Branding and UI for international clients: landing pages, mobile-first interfaces, rapid prototyping in Figma.

Brand Designer — Hilton Dushanbe

2018 — 2020

Branding and marketing assets; rebranding of the Inasia restaurant.

SKILLS

Product design	UX and information architecture · user flows & CJM · UX audit and redesign · design systems · role and permission models
Domains	Fintech and payment flows · marketplaces · admin panels and back-office · internal B2B platforms · mobile apps
Tools & handoff	Figma · Framer · Webflow · Tilda · HTML / CSS / JavaScript · BRD and functional requirements · bilingual interfaces (RU / EN / TJ)

EDUCATION

- Applied Mathematics & Computer Science**
Saint Petersburg Electrotechnical University "LETI" · 2015 — 2017
- Applied Informatics in Economics**
Russian-Tajik (Slavic) University, Dushanbe · 2011 — 2015
